

FLOWCRETE BREWS UP THE PERFECT FLOORING SOLUTION FOR BEER MANUFACTURER

► Isocrete Project Management has coordinated a major contract for Heineken, the UK's leading cider and beer business, at the company's facility in Manchester.

► The material was selected owing to its excellent durability and high slip-resistance grade.

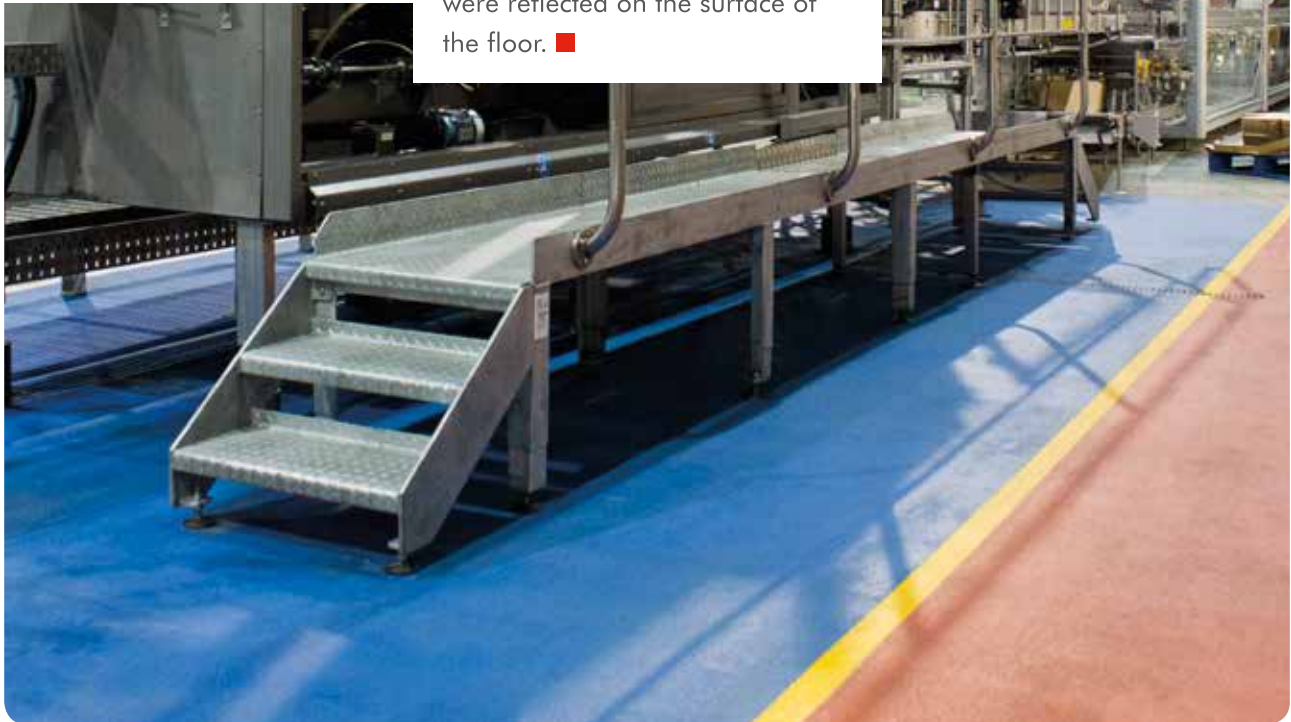

► Isocrete Project Management has coordinated a major contract for Heineken, the UK’s leading cider and beer business, at the company’s facility in Manchester.

More than 1,300 square metres of Flowcrete UK’s hardwearing Deckshield Rapide Top Coat system have been installed at the site with a large area being covered within the Foster’s canning line as well as adjoining hop store and loading bay.

The material was selected owing to its excellent durability and high slip-resistance grade – a must with the volume of forklift traffic moving between wet and dry processing areas.

The system was laid on a variety of existing substrates including existing screed and ceramic tiles and has been installed under a colour matching service to ensure that Foster’s distinctive red, blue, black and yellow brand colours were reflected on the surface of the floor. ■
